

CLAMPS

The EGA Master non-sparking clamp is used to safely hold workpieces in industrial work, especially in environments with risk of explosion, such as ATEX zones, refineries or chemical plants.

1. It is made of non-ferrous alloys (beryllium copper or aluminum bronze) that prevent the generation of sparks, is corrosion resistant, non-magnetic and highly durable.

2. With a hardness of 311-408 Brinell (Cu-Be) and 241-311 Brinell (Al-Bron).

3. His F-type design offers a firm and adjustable grip, complying with international industrial safety regulations.

MOD. F

COD.	MAT.	COD.	MAT.	CAP. (mm)	Kg
74250	Cu-Be	74251	Al-Bron	400	2,2

Cu-Be Beryllium copper
Al-Bron Aluminium bronze
