DN2HC-ATH

Chamfering Tool for Hardened Steels

Mitsubishi Hitachi Tool Engineering, Ltd.

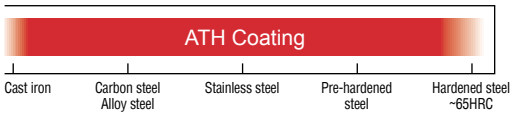
New Product News | No.1904E | 2019-12

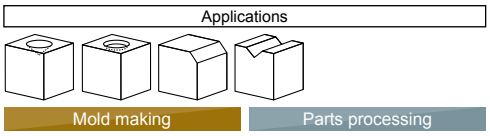
Allows numerically controlled (NC) automated centering and chamfering. Long tool life even when machining hardened steel

Features of DN2HC-ATH

01 Thinning provides good biting properties.
High defect resistance due to the blunt-angled tip
Optimized edge shape for outstanding cutting capabilities and high defect resistance

02 ATH coating provides long tool life, even with hardened steel.





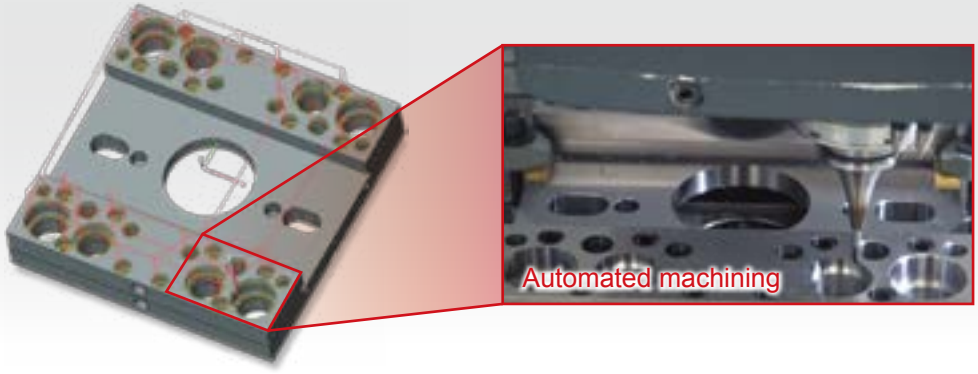
DN2HC-ATH
ϕ3～ϕ16 [72 Items]

Task

A wide range of chamfering is required for molds and parts, which are often processed manually.
In addition, few chamfering tools are available for hardened steel.

Proposal

Using DN2HC allows NC automated machining, reducing manual processing time.
Compatible with a wide range of steel types ranging from soft steel to hardened steel; provides long tool life and quality processed surfaces.

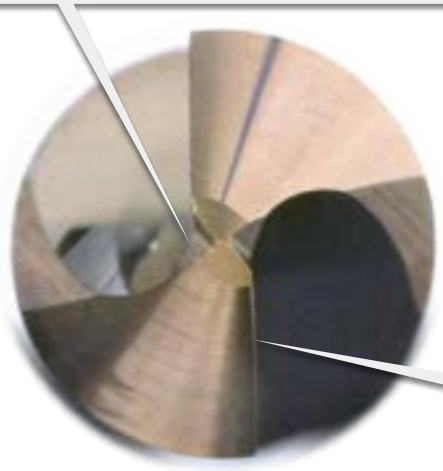


This is Point!

Edge shape offers high defect resistance and outstanding cutting capabilities to suppress burr generation and achieve automated and stable machining.

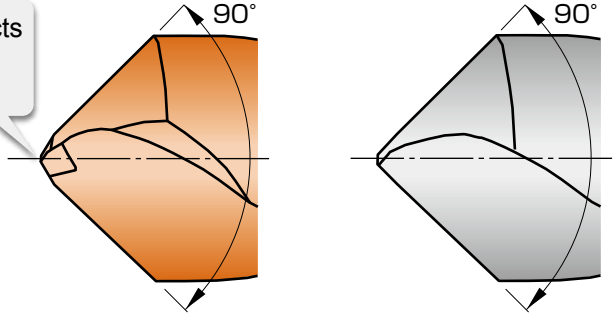
Features 01 Employs blunt-angled tip and thinning for optimized edge shape.

Good biting properties by thinning



Resistant to defects due to the blunt-angled tip

DN2HC-ATH | Conventional chamfering tool

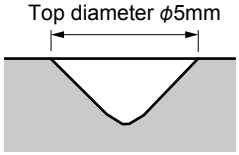


Optimized edge shape for outstanding cutting capabilities and high defect resistance

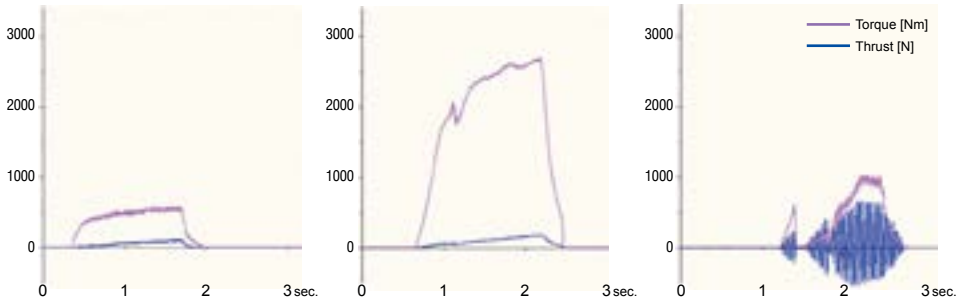
Cutting conditions

Tool：DN2HC0600-ATH (ϕ6×ℓ15×L66)
Work material : Steel for plastic molds (53HRC)
Machine : Vertical MC (HSK-A63)
vc=30m/min *n*=1,592min^{-1}
f=0.06mm/rev *vf*=95mm/min
Coolant : Water base coolant (External)

Top diameter ϕ5mm



DN2HC-ATH	Conventional A	Conventional B



Low torque and thrust	Torque rising	Waveform disturbance caused by defect

Features 02 Adopts ATH Coating

Long tool life even with hardened steel

- Hardness and oxidation resistance of TH coatings is further improved. Enables longer life and higher efficient when cutting high-hardness materials. (Si nano composite coating with finer crystal particles)
- Exhibits amazing performance when cutting high-hardness materials (55HRC or higher)
- Long life for both dry cutting and wet cutting

Cutting conditions

Tool：DN2HC0600-ATH (ϕ6×ℓ15×L66) Work material：SKD11 (60HRC)
Machine：Horizontal MC (HSK-A63)
vc=30m/min *n*=1,592min^{-1} *f*=0.06mm/rev *vf*=95mm/min
Coolant：Water base coolant (External)

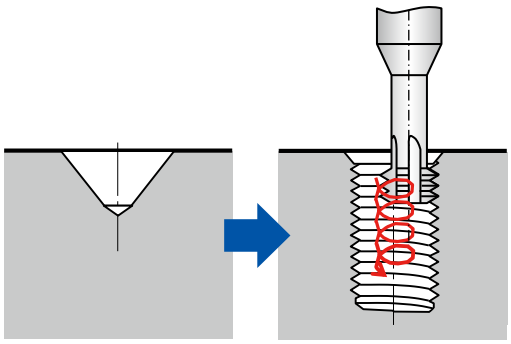
Steel for plastic molds (53HRC) chamfering/threading field data

Generally, a tapped hole entrance requires chamfering. Combination of DN2HC and Epoch D Thread Mill allows deformation-free threading.

Cutting conditions
Centering
Tool：DN2HC1200-ATH (ϕ12×ℓ28×L95)
Work material：Steel for plastic molds (53HRC)
Machine：Vertical MC (HSK-F63)
vc=30m/min *n*=800min⁻¹ *f*=0.06mm/rev *vf*=48mm/min
Coolant：Water base coolant (External)

Proposal process



Centering

D Thread Mill, threading

Centering ➡ M8 threading

No thread deformation

Allows smooth thread fastening.

Features of Epoch D Thread Mill

- This single tool can perform both drilling and threading simultaneously.

Size M2～M20

No pilot hole needed

・For hardened steel, large cutting loads may prevent machining of max available depths in a single operation. Make adjustments: for example, machining the groove depth in two operations, referring to max available depth ratios.

【Setting of cutting conditions】

・Coolant is recommended for work materials of 40HRC or harder, stainless steel, and aluminium.
・These recommended cutting conditions are for general guidelines. Adjust cutting parameters for actual machining based on machining shape, purpose, machine used, and other factors.
・When attaching the tool, use a collet free of scratches or dirt. Keep tool runout to 0.02 mm or less.
・Secure the work material firmly to prevent deformation, deflection, and vibration.
・Watch for smoke and fire hazards posed by heated chips or tools.

MOLDINO

The Edge To Innovation

The diagrams and table data are examples of test results, and are not guaranteed values.

⚠ Attentions on Safety

1. Cautions regarding handling

(1) When removing the tool from its case (packaging), be careful that the tool does not pop out or is dropped. Be particularly careful regarding contact with the tool flutes.
(2) When handling tools with sharp cutting flutes, be careful not to touch the cutting flutes directly with your bare hands.

2. Cautions regarding mounting

(1) Before use, check the outside appearance of the tool for scratches, cracks, etc. and that it is firmly mounted in the collet chuck, etc.
(2) If abnormal chattering, etc. occurs during use, stop the machine immediately and remove the cause of the chattering.

3. Cautions during use

(1) Before use, confirm the dimensions and direction of rotation of the tool and milling work material.
(2) The numerical values in the standard cutting conditions table should be used as criteria when starting new work. The cutting conditions should be adjusted as appropriate when the cutting depth is large, the rigidity of the machine being used is low, or according to the conditions of the work material.
(3) Cutting tools are made of a hard material. During use, they may break and fly off. In addition, cutting chips may also fly off. Since there is a danger of injury to workers, fire, or eye damage from such flying pieces, a safety cover should be attached when work is performed and safety equipment such as safety goggles should be worn to create a safe environment for work.
(4) There is a risk of fire or inflammation due to sparks, heat due to breakage, and cutting chips. Do not use where there is a risk of fire or explosion. **Please caution of fire while using oil base coolant, fire prevention is necessary.**
(5) Do not use the tool for any purpose other than that for which it is intended.

4. Cautions regarding regrinding

(1) If regrinding is not performed at the proper time, there is a risk of the tool breaking. Replace the tool with one in good condition, or perform regrinding.
(2) Grinding dust will be created when regrinding a tool. When regrinding, be sure to attach a safety cover over the work area and wear safety clothes such as safety goggles, etc.
(3) This product contains the specified chemical substance cobalt and its inorganic compounds. When performing regrinding or similar processing, be sure to handle the processing in accordance with thelocal laws and regulations regarding prevention of hazards due to specified chemical substances.
